## Power Control Switch Operation Manual

The controller is dedicated to power Smart-Tex heating clothing

1/ Connect the Controller with the Heating Clothing and the battery using the Santi or T-Dean connector. The permissible voltage is 14.8V, the permissible load is 10A.

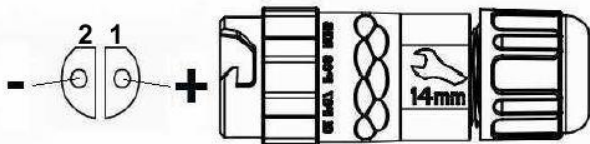

2/ Piezoelectric button is closed in a hermetic casing - it is attached to the diving suit. Pressing the button wirelessly controls the power of the switch.

3/ The controller only starts working when connected to the heating garment.

- First press 33% power - two vibrations
- Second press 66% power - three vibrations
- 3rd press 100% power - one vibration 5seconds
- 4th press, turning OFF - one vibration

One CR2032 battery is installed in the button housing.

**ATTENTION !!!**

**POLARIZATION**

**Note: When connecting a battery other than the Smart-Tex, pay attention to the correct polarity on IN as photo**
